

## **Case Study: Facilitating Salmon Restoration for the US Department of Fish and Wildlife**

**Client:** US Department of Fish and Wildlife

**Project:** Keystone Initiative Facilitation

### **Challenge:**

The US Department of Fish and Wildlife needed to unite diverse stakeholders, including Tribes, regional non-profits, and state and federal agencies, to develop a collaborative approach for restoring salmon populations in a key state region.

### **Solution:**

JW Industries Group (JWIG) provided expert facilitation to guide discussions, build consensus, and support a Memorandum of Understanding (MOU) that outlined the roles and commitments of each party involved in the development of critical salmon restoration.

### **Outcome:**

Our facilitation led to the successful signing of the MOU, establishing a strong, cooperative framework for ongoing salmon restoration. This agreement secured additional resources and set a precedent for future environmental restoration partnerships in the region.

### **Impact:**

- Strengthened collaboration among stakeholders
- Facilitated decision-making processes
- Established a sustainable foundation for continued restoration dialogue

### **Conclusion:**

JWIG's facilitation was crucial in aligning the diverse interests of stakeholders, ensuring the success of this keystone initiative and contributing to the restoration of vital salmon populations.
